

IMPACT PF-STATION IS EvoCSII

10018.00.0.00

Key facts:

- Operation of up to four powder feeders with integrated scales simultaneously
- Flexible positioning of connections
- Reduced noise emissions thanks to central exhaust line

The Impact PF-Station IS EvoCSII accommodates up to four Impact Powder Feeder IS EvoCSII units. Depending on your needs, you can select a version with two or four feeder slots – with the 2-slot version easily upgradeable to four slots. An X-connector allows the simultaneous

operation of four powder feeders. If maintenance is required on one of the powder feeders, the supplied blanking plate can be used to close the emergency stop circuit. This enables continued operation with one less powder feeder, depending on the system configuration.
