Impact Innovations provides High Pressure Cold Spray Technology to Tinker Air Force Base, OK, USA

Rattenkirchen, Germany – Oct 23, 2026

Impact Innovations GmbH – the technology leader in high pressure cold spray – was selected by the US department of war to supply a high-pressure cold spray system to Tinker Air Force Base in Oklahoma, USA.

Impact Innovations EvoCSII high pressure cold spray system will be delivered as part of a turnkey installation expected to be commissioned in 2027.

The Impact EvoCSII system was chosen as it is the only cold spray machine in the market capable of producing alloyed aluminum coatings without the need to introduce a second phase into the coating.

The acquisition of an Impact EvoCSII system will allow the government to industrialize the cold spray process for repairs that involve hundreds of parts per year.

“We are proud to support Tinker AFB with our high-pressure cold spray system contributing to future combat readiness,” says Leonhard Holzgaßner, Co-CEO and Technical Director at Impact Innovations “and will continue to support US armed forces and the defense industry in creating the manufacturing technology base of the future.”

About Impact Innovations

Impact Innovations GmbH is the Global Technology Leader for industrial Cold Spray equipment and your solution partner from application development to industrialization. We empower customers worldwide with systems and solutions that drive innovation in repair, coating, and additive manufacturing - reliably and efficiently.
